

CLASSIC TUNNEL FORMWORK

NERU has been producing and distributing tunnel formwork worldwide for over 25 years. There is no other construction technique that can compare to Tunnel Form in terms of speed of construction, quality of finish, long life, low labour costs with high production levels, proven superior earthquake resistance. Also due to the system being all steel faced Tunnel Form therefore offers long formwork lifespan, given multiple reuses and therefore offering superior economy. **NERU Tunnel Formwork** is an attractive option, with our expert trained technical team providing advanced project solutions and with our factory, using the latest machinery, advanced manufacturing techniques and well trained staff we produce the perfect tunnel form for your project needs. Tunnel Formwork is **NERU's** expertise.

- **Economy:** Being able to use the formwork for hundreds and hundreds of reuses drastically reduced investment costs.
- **Quality:** With a near perfect surface finished resulting from the all steel face of the formwork, only minimal fine plastering or direct painting is required saving follow up labour costs. The use of prefabricated components such as door frames, kitchen surfaces and cupboards leads to standardization of follow up purchasing.
- **Applications:** Can be used anywhere. With its intrinsically fast daily construction cycle and its proven resistance to earthquake and other natural disasters the system can be used worldwide. A simple and systematic that can be taught and learned very quickly by your workforce.
- **Modular:** With each project specific formwork needs being produced from many standardized components, these parts can readily stored at the end of the construction. Modification is easy, according to the new projects requirements new components can be added to the existing tunnel formwork and then construction on the new project can then commence.
